Document Purpose

The purpose of this document is to describe the STATUS CHECK API Operation to enable merchant developers to integrate their webpages with the IPG Gateway. Refer to the *IPG Gateway – 0 – Overview* document for how this API Operation is used in the merchant processes.

The STATUS CHECK API Operation provides a method to check the status of a transaction in the IPG Gateway. Although, each IPG Gateway API Operation provides the resulting status after a transaction has been processed, the merchant may want to reconcile data in their local database to that in the IPG Gateway.

The transaction is queried by the Merchant's transaction identifier or by the transaction identifier the IPG Gateway.
